READ CAREFULLY BEFORE USE KEEP FOR FUTURE REFERENCE Instructions:

Congratulations on purchasing this product!
Please read this user manual carefully. The user manual is an integral part of the product. Keep it, along with the packaging, for future reference. If you pass the product on to third parties, always include this user manual. This product must be assembled by an adult. This product is designed for private and commercial use. Using the product requires certain skills and knowledge. Use it appropriately for the age and exclusively for its intended purpose.

The MASTERBOARD is ideal for beginners, intermediates, and masters to learn and train individual techniques as accurately as possible, almost in slow motion. The MASTERBOARD refines kick technique, enhances endurance, and stabilizes holding strength and balance. The MASTERBOARD provides immediate feedback to everyone, indicating whether the technique is performed correctly.
Technical Specifications:

Item: MASTERBOARD "professional"
Item number: 202030
Dimensions: 45x10x14 cm
Material: Polycarbonate
Product weight: 1.25 kg (without stand)

18x Screws
3x Adjustable sleeves
3x Stop buffers (transparent)
4x Elastic buffers (transparent)

Check your order for completeness.
Other included parts are for transport protection and are not needed for assembly and use.

Safety Instructions:
Although the MASTERBOARD is also designed for children, it is NOT a toy. Ensure the device is in perfect technical condition. Do not use it if it is damaged or has loose components. Modifying the product or replacing it with non-original parts can lead to accidents.
Use only in connection with product usage. Children should train only under adult supervision. Only one person at a time may train with the product. The product is designed for precise learning of kick techniques. It is explicitly stated that the product is not designed for hard and strong hits or kicks. Always ensure the kick is performed horizontally on the rotating targets/plates to trigger a tilting motion. Hard hits can damage the device. We recommend placing the MASTERBOARD on a solid surface. Use the MUDOTOOLS stand designed for the Masterboard.

Before the first training:

Find a safe, sufficiently spacious place for training so that no furniture or people can be damaged.

Storage and Cleaning:
For storage, a dry, dark place is recommended to prevent material discoloration. Clean your set with a cloth or damp rag. The MASTERBOARD should be protected from moisture as it can cause corrosion on the metal parts. After use, it is recommended to store the MASTERBOARD in a well-ventilated and dry place. Store the product in a safe, weather-protected place to avoid damage and injury.

Maintenance:
Check the product for damage and wear before and after use. Do not make any structural changes. For your safety, use only original spare parts. If parts are damaged or sharp edges and corners have developed, do not use the product! If in doubt, contact our service at info@mudotools.de

Disposal:
Please dispose of the product at the end of its life at your local disposal company.

Service:
The warranty is legally guaranteed and runs for 24 months for new goods. We strive to deliver flawless products. If errors occur, we are equally committed to resolving them. Therefore, you will find numerous information about the product, spare parts, lost assembly instructions, and problem solutions at http://www.mudotools.de

Instructions:
Without automatic setup mechanism
To begin training, place the MASTERBOARD on a solid, object-free surface (e.g., table). The automatic setup mechanism can be turned on and off by sliding the magnets. All three magnets must be placed in the rear designated recesses. Now you must manually set up the three target plates at a right angle. These can now be knocked over with foot or hand through slight horizontal movements. Re-setting the targets is necessary to perform a new exercise.

With automatic setup mechanism**
To begin training, place the MASTERBOARD on a solid, object-free surface (e.g., table). The automatic setup mechanism can be turned on and off by sliding the magnets. All three magnets must be removed from the rear designated recesses. Then push them from below to the front into the recess. To ensure the magnets are correctly placed, there should be a click, and the magnets must be firmly locked. Now the automatic setup mechanism is activated. These can now be

knocked over with foot or hand through slight horizontal movements, and the automatic setup mechanism will reset the plates.
ENJOY THE MASTERBOARD
